

Join us for a **Regional STEM Summit** in your area - connecting Minnesota's business and higher education communities to students in grades 7-12 from all over the state.

WHO: **Businesses, colleges and universities** - offer an interactive and hands-on exhibit booth that will engage 7-12th grade students and demonstrate career opportunities in Science, Technology, Engineering and Math (STEM) career fields.

Students grade 7 - 12 - take the opportunity to explore the careers and fields of study you'll need for success after high school.

WHAT: These summits are a component of the statewide initiative to promote advanced science, technology, engineering and math (STEM) coursework to Minnesota students. The future success of Minnesota's economy depends on a pipeline of well-prepared students with the education and skills to help keep Minnesota's business and industry competitive. STEM Summits bring business, higher education, local government and communities from the state together to prepare our students for an increasingly competitive global marketplace.

WHEN: 9:00 a.m. – 12:00 p.m.
